

ROBOFEST 2009 Workshop Participation Requirements

On campus workshop

1. Teams must be registered at an official Robofest 2009 Regional Qualifying Site.

Therefore, each Team member needs to know the team number, when checking in.

2. Teams must bring the following:

- a. A laptop for programming the robot with programming software
- b. Laptop power cord
- c. USB Cable
- d. Batteries or fully charged battery pack
- e. Any wheeled robot with **two** downward facing light sensors, and one forward facing ultrasonic sensor. See the following picture as a **sample** (your robot does *not* need to be the same). If you do not have two light sensors, you may borrow one from us during the workshop. So bring extra Lego pieces to attach it.

Workshop via Webinar

We will send the URL for the webinar **only to the coaches who registered teams at a 2009 qualifying site**. It is also recommended to prepare a robot similar to the above with two light sensors and one ultrasonic sensor.
