

ROBOFEST

RoboFashion & Dance Show 2009

(v1.0 Official Version, 01-11-09)

Robotics in education creates an innovative and simulating classroom environment, in which students have fun, are excited, and are motivated to learn math, science, engineering and technology. Robotics transforms imagination into reality. Robotics can also connect classroom lessons to real-world environment. The RoboFashion & Dance Show category has been created in order to promote imagination, creativity, harmony, collaboration, technological arts, and beauty. As a result, it will get more students interested in science, engineering, math, and technology at an early age.

RoboFashion & Dance Show Challenge

A team of robots (two are recommended) will use a stage that does not have walls to show off their costume, walk (driving), and performing dancing motions. Robots have up to two minutes to demonstrate their robots to music; the music is the team's choice. Robots may start from any area and may finish at any location. Robots may follow the edge of the boards and do not need to follow the lines, especially on the table area. Team members may interact/dance together with their robots while sending various signals to the robot for synchronizing the dance.

Figure 1. A sample stage

The design of the stage is up to the team except the following:

- The stage is made of one or two 30"x72" plastic folding tables (light surface color, not necessarily white). For example: <http://www.lifetime.com/tables/chairs/commercial6footfolding.aspx>
- The team is responsible for bringing the stage or contacting the qualifying or World Championship organizer to prepare the stage.
- Teams can use any shape using two tables. See a sample stage in figure 1 above
- Teams can use any material such as paper, black tape, aluminum foil tape, etc to create land marks for the robot show on the tables.
- You may place some objects on the table; however, There should be no walls on the table
- The tables can be placed on 10.5" high crates or dark color floor.

RoboFashion Show simulates human fashion shows. As a reference for ideas, a bridal fashion show video can be found at <http://video.google.com/videoplay?docid=3504599566833590400&q=fashion+show>

RoboFashion Show with story (RoboSkit) is welcomed. Teams can use microphones during the show.

Robots specifications

- Number of robots per team: one or more (two robots are strongly recommended)
- Robot type: any, as long as fully autonomous (no remote control is allowed)
- Robots may not be touched after they are started. If touched due to malfunctions of the robots, points will be deducted by judges. Human players, however, are encouraged to use voice, sound, claps, hand signal for the ultra sonic sensor or camera, or visible light to signal robots.
- Legged robots are welcomed
- Any programming language can be used
- Number and types of robot controllers, sensors, motors, or parts: unlimited
- Robot shape: human or animal like with arms, tail, and creative costumes
- No limitation on size: width, length, height, or weight

Robot programming requirements

- Each robot may need a reliable program to move and dance on the tables
- The lighting condition of the stage is static but unknown until the day of the competition
- If a team has multiple robots, there must be a method to work together such as the ability to detect member robot in front of it and stop and be able to automatically restart.
- Each Robot is supposed to cover the whole stage for getting better judging scores. This means each robot needs to visit every corner on the table.

Judging

Each team is given a chance to introduce the team members and robots to the audience using the general Robofest rule. Just like the judging of figure staking, a panel of judges will decide winners using various criteria such as robot design, decoration of the robots, costume, completeness (cover the whole stage or not), reliability (human help or not), ***the application of math and science concepts learned (new)***, technological merit, creativity, artistic choreography and performance, synchronization, harmony, team work, etc.

Team registration

- Go to www.robofest.net
- Maximum 7 members per team
- 5th – 8th grade students
- Each team must bring everything needed for the show, such as a computer (laptop) to program, electrical cords, music CD or MP3 file, Music player, etc.
