

## Robofest 2011 BTOS Game Rule Change

2-23-11

The maximum robot size in any orientation is 35cm x 76cm (previously 25cm x 76cm). The size will be checked when the robot is impounded. Manual configuration changes made to the robot during the round must meet this size requirement.

The red dashed line will be referred to as Home Base Line, and it will be at least 35cm from the short end of the table (previously 25cm).

To start, the robot can be placed anywhere in any orientation in the Home Base area as long as part of it is on or over the foil tape base and meets the size requirements; it cannot cross the Home Base Line but it may hang over the edges of the table.
